Subject: Red List – Living Building Challenge 4.0

To Whom it May Concern,

The Living Building Challenge, originated by the non-profit International Living Future Institute, is a certification program that encourages sustainability in building construction projects.

Materials Imperative 13 of the Living Building Challenge 4.0 contains the Red List. The Red List consists of materials and chemicals that cannot be used on Living Building Challenge projects.

ArcelorMittal and AM/NS Calvert produce flat-rolled steel that is compliant with the Living Building Challenge 4.0 Red List. However, should a customer include a request for Cr6 passivation coating on their purchase order, the steel will be noncompliant.

For freedom from Cr6, the customer must order non-passivated product or Cr3 passivated product currently available from AM/NS Calvert and AM Dofasco facilities.

If you have an interest in discussing this information further, please feel free to contact ArcelorMittal NA or AM/NS Calvert representatives noted below.
